

“These Are Some of my Favourite Things” Plans

Pick 3 things you love and create an app that showcases those things:

1. Watching films
2. Mash-up videos
3. Gaming

Create a JSON object that contains at least 4 properties:

```
"cinephile": {  
  "name": "Watching films and film analysis videos",  
  "description": "A movie lover watches a film to pass the time, but a I watche it to  
fill my time",  
  "image": "cinephilejpg.jpg",  
  "imageLink": "https://www.netflix.com/ca/"  
},  
"mash-up": {  
  "name": "Watching all kinds of video mash-ups",  
  "description": "I like what is familiar. I also enjoy surprise. Thus, watching or  
listening with anticipation to see how a story I know so well has been altered gives  
lots of fun. ",  
  "image": "mash_up.jpg",  
  "imageLink": "https://www.youtube.com/watch?v=JPtwlGmgAjk"  
},  
"gaming": {  
  "name": "Playing games, they are fun!",  
  "description": "Video games give me opportunity to do something new. I can  
make friends, complete quests, and obtain items. All these experiences can be  
novel. ",  
  "image": "gamesjpg.jpg",  
  "imageLink": "https://www.gamestop.ca"  
}
```

you must include an image of some kind:

The three “things” should be represented by an interactive control on the page (button, image, etc) - when the user engages with the control, show more data about that “thing”. The controls must use the JSON object as their data source - use the Fetch API to retrieve the object on page load and immediately update the view.
